

Recognised for "Commitment"

Peter Gibson

Peter demonstrated strong Care and Commitment by delivering a critical enabling change to how Control-M batch NOTOK messages are handled. His work allows alerts to be configured outside of the mainframe environment and ServiceNow incidents to be raised automatically when batch job issues occur. By getting this foundation right, Peter has improved operational reliability and ensured issues can be identified and responded to quickly, without manual intervention. This behind-the-scenes contribution shows a clear commitment to building solutions that support teams and the business at scale. Well done Peter! Thanks for all your hard work!
